THE NEW YEAR;

ITS SIGNIFICANCE

By "The Gentlewoman"

Only a year ago! What lives! What schemes for the future! What hopes! What noble aims! What generous strifes!

It is a mistake to reflect too much upon the past. It has its lessons, but the learning of them should not absorb our attention as to preclude us from incorporating them into our daily life, transmuting the memory and experience into the gold of useful practicality and ready work that yields results.

Introspection was getting so insistently a habit of the New Year that we were beginning to forget it was but a means to an end—the reflective path to the large and spacious chamber of lofty resolve and accomplishment. We fancy sometimes that a faint sugges-

tion of maudlin sentiment crept into the self-analysis, converting what should have proved a stepping stone to higher places of activity into a mere purgatory of self-abnegation ending in a self-debasement. We want to make our reflection an avenue that leads through paths of earnest thought to the high tablelands of glorious endeavor and achievement. The soul itself must be utilitarian and not waste itself in unprofitable penance.

What has the year accomplished for womanhood? Woman has unquestionably been a remarkable renaissance of the feminine. Woman has broadened her outlook, established her claims to wider recognition of her talents, improved public life with her power for good, and raised her physical and mental scale of the sex. Thank God, among the general advancement there is one that is inspiring and reactionary—a reversion to the old veneration for the sanctity of motherhood—the holiest and divinest calling of all, a calling involving great sacrifice, great sorrow, but bringing with it, on the other hand, untold compensating joys.

Queen Mary, of England, has set an example in this direction which has seldom been excelled. Among the professions the bar still closes its doors to female aspirants to forensic distinction, but after the remarkable ability displayed in one case where a woman conducted her own defense (and I say it, although unsympathetic with the particular phase of the cause she had to plead), there can be no longer any doubt about woman's qualifications for that exclusive profession. In the medical profession woman has done well, while in the humbler ranks of nursing our efficient hospitals tell their own eloquent tale of the labor done by those who "watch the stars out by the bed of pain."

For the large masses of the girlhood and womanhood the arena of commercial life has widened its doors, and evidence is seen on all hands of the efficiency of the new female recruits to the business ranks. Their presence in this great army of strenuous endeavor will tend to purify and strengthen it, make it worthier than it has ever been before. The prizes are many, but those who do not gain them must not be discouraged. The very striving after them stiffens the fiber. "The athlete nurtured for the Olympic game gains strength at the start."

While I have dwelt in this short review of woman's progress in 1911 on the many expert phases of her career, it must be pointed out that ability is not the be-all and the end-all of woman's existence. It is the great lever that moves things, but another quality is required for the settling down.

Greater than all her accomplishments is her capacity for shedding around her wherever she goes the fragrance of a sweet and beautiful life, and smoothing out the raveled sleeve of care. It is in the belief that she is fully capable of this mission that one looks forward in confidence to the immediate future in which the pulse of vibrant life will throbb sympathetically and intellectually to the ultimate benefit of the whole of the community.

Rheumatism Stomach Troubles Kidney Ailments Faywood Hot Springs

It cures, and you remain cured, we know, and you will try it.

Conceded the greatest kidney water on earth.

Why not visit Faywood Hot Springs first, since you will eventually go there anyway?

Large Modern Hotel. Perfect Climate. Booklet.

COAL MINING THIS YEAR IN UNITED STATES WAS UNPROFITABLE

Many Mines Operated at a Loss; Little Demand from Manufacturers and from the Railroads.

Washington, D. C., Dec. 30.—The coal output of the year was little more than that of 1910, in spite of the fact that most of the mines in the Mississippi valley and the south-western states were closed down for practically six months during 1911.

The general feeling throughout this region in 1911 was that business was exceptionally bad. Illinois alone is capable of producing, with her present development and equipment, as much coal as is now produced in the entire interior region, including Illinois, Indiana, western Kentucky, Iowa, Kansas, Missouri, Arkansas, Oklahoma and Texas. Illinois without opening another mine can produce 100,000,000 tons of coal. The output for Illinois coal can not absorb more than 50,000,000 tons, and in 1910 Illinois alone produced 40,000,000 tons. The effect of these conditions is shown in the lower prices in 1911 compared with 1910. It is estimated that the price of Illinois coal was 3 cents a ton less in 1911 than in the previous year. In Indiana the price was 5 cents less, and in the southwestern district it was from 10 to 12 cents less. It is claimed that the cost of mining has been increased in all portions of the region.

Decrease in Rocky Mountains.
The production of coal in most of the Rocky mountain states decreased in 1911 about 10 percent, compared with 1910. The reduction was due primarily, first, to an unusually mild winter in 1910-11; second, drought in the agricultural states west of Mississippi river, which caused large reduction in the demand for domestic purposes in South Dakota, Nebraska, Kansas, Texas and Colorado; third, a decreased consumption of coal in locomotives on account of the reduced traffic on practically all the western railroads; and fourth, the resumption of coal mining operations in the central and southwestern states which had been suspended during the strike of 1910.

Improved Mining Methods.
In striking contrast to the reprehensible practice of shooting coal from the solid, as exemplified particularly in Arkansas and Oklahoma, are the improvements in mining methods which have been put into effect in some of the Rocky mountain states, especially in New Mexico.

On the Pacific coast conditions were not materially different in 1911 from what they were in 1910. The production of coal in California continued to be the dominating factor and probably will remain so for some years to come.

Coal Production in 1911.
The shipments of anthracite reported by A. H. Armstrong, chief of the bureau of anthracite statistics, for the 11 months ended November 30, amounted to \$3,538,872 long tons, and estimating the shipments during December at \$250,000 tons, the total for the year was 39,108,000 long tons. This exceeded the previous best record of year by approximately 3,000,000 tons.

The local trade in 1911 amounted to about 2,000,000 long tons, and the colliery consumption amounted to about 4,000,000 tons, so that the total production was very close to 39,108,000 long tons, or about 4,700,000 tons over the output of 1910. A part of the increase in production is probably due to the stocking of fuel in anticipation of April 1, 1912, when the wage agreements between the coal miners and the operators are expected to be completed.

On the whole the bituminous trade has been demoralized and discouraged, and much of the business has been conducted at a loss. The principal cause for this, particularly in the eastern states, has been the depression in the iron trade which was more serious than in 1910.

MINING NEWS

INSPIRATION TO BUILD ITS MILL Has Already Engaged Workmen—Miami Properties to Resume

Miami, Ariz., Dec. 30.—The Inspiration Consolidated Copper company is hiring carpenters and mill men to commence work on January 10. It is understood that the new concentrating mill will have a capacity of 3000 tons a day, and will cost approximately \$1,000,000.

When this mill is completed it is estimated that the annual production of copper will be 15,000,000 pounds at a cost of about 9 cents a pound. The head men of the A. & E. railroad have been on the ground during the week, and it is understood that the branch to the Inspiration and Live Oak mines will be started next week. There is practically no grading to be done and only about two miles of road to be built, it will not take over a month to construct the branch.

Warrior Company Resumes.
The Warrior Copper company has hired 200 men and will resume mining its property on January 7. Superintendent J. H. White will resume the shipping of ore to the El Paso smelter as soon as possible. The company owns 21 claims, or 1154 acres. The ore is chiefly of the schist, dacite, tuff, diabase and conglomerate.

In seven years the company shipped 16,174 tons of ore, which averaged 3.41 percent copper, which yielded 12,556,434 pounds of fine copper. The equipment includes a steam plant, burning petroleum, buildings are an assay office, engineers' office, carpenter shop, blacksmith shop, machine shop, and a 300-ton mill.

Was a Banded Property.
The Warrior Development company took a bond and lease on the property on December 22, 1909, for \$250,000, for three years. The company made an initial payment of \$100,000, one of \$125,000 on June 30, 1911, and \$125,000 was paid on December 31, 1911. The Development company formally surrendered its bond and lease and returned the property back to the Warrior Copper company. The Development company shipped on an average of 100 tons of ore a day to the El Paso smelter. Considerable churning drilling was done on the property in 1910 and 1911—one hole on the property in the vicinity of the Winnie shaft being 200 feet in length, showing mineralization, and a 350 foot drill hole proved the existence of chalcopyrite disseminated in the rock.

Cost of Production.
When shipping ore to the El Paso smelter the average cost of production was \$7.42 a pound, of which \$3.24 cents were for smelting. The average net profit to the company on each ton shipped is \$3.73. This property is considered one of the best in the district, and is located about five miles northwest of Globe.

Two Mines to Start.
C. Clark, manager of the Orphan Copper company, located one mile south of here, has moved from Globe to his dwelling on the company's property, and it is understood that he will put a force of men at work developing the property. The Green mine has completed the assessment work.

Several wagon loads of lumber and a new gasoline hoist were sent to the camp of the Orphan Copper company this week. Superintendent Moyle has everything in readiness to push development work on a large scale and expects to make his first shipment of ore to the O. D. smelter in February.

GOES TO WORK ON HIS CLAIMS IN THE SAN ANDREAS
Tularosa, N. M., Dec. 30.—Hubbard Douglas has gone to the San Andreas district to work on his claims. He has two other men with him to help do the work. Arthur Douglas has also taken the San Andreas to look after mining interests.

Wanted, near railroad, tract twenty-five to hundred thousand acres rapely land with proven water supply for pumping. Titles, soil and water must be examined. Will deal with owners only, no middle man. H. A. Carpenter & Brother, El Paso, Texas.

CHURN DRILLS AT WORK IN LIVE OAKS

Great Deal of Assessment Work Is Done in Mines at Miami

Miami, Ariz., Dec. 30.—The Live-Oaks company is working two churn drills, numbers two and three. One is situated 100 feet and the other 150 feet from the surface. No. 2 is on 1100 feet and is in ore from the start. It is not likely that the churn drilling will be done on the property. Additional men have been employed for underground work.

Copper and Mark Kocher are doing the assessment work on their claims located in the Pinalis, eight miles from Globe. They are also doing considerable development work on their seven claims in the Pinto district, 10 miles northwest of Globe, and adjoining the property of the New Copper Mining and Smelting company, where they have encountered ore which averages a ton in gold and runs high in copper.

S. B. Miller is doing the assessment work on his five claims, located one and one-half miles south of the Globe. He has completed the road over \$4000 worth of assessment work. Development work has been done on the property. The ore assays as 20 percent copper. He intends to make a sample shipment to the O. D. smelter.

Dan K. Williamson and **Frank Bestington** have completed the assessment work on their group of 25 claims, known as the bedding adjoining the Shulze group, and will now commence development work. Superintendent Williamson announces that a force of men will be kept constantly employed in the next year, and ore will be shipped to the O. D. smelter.

Erickson and **B. P. Crawford** completed the assessment work on their 25 claims in Powers gulch, located 12 miles south of Globe. Superintendent Hoffman expects to keep a force of men at work developing the property.

MINE OF GOLD IS SOLD
NEAR GLOBE, ARIZ.
Work Is To Be Commenced on the Claims in a Short Time. County Treasurer at Globe a Heavy Stockholder.

Globe, Ariz., Dec. 30.—Lyman C. Woods has purchased a third interest in the Del Sita group of claims, located in the Del Sita Mining district. E. F. Crawford and wife. The other owner of the balance of the stock is county treasurer P. H. Williamson. It is expected that work will be commenced on these claims within the next two weeks. These claims are presumed to be rich in gold and were discovered by Indians who showed the location to Del Sita, the old Indian scout who was killed at Roosevelt by being hit with rocks flying from a blast that threw him set off.

Notice.
Wm. Hannon, vice president of the International Association of Machinists, will address an open meeting at Union Labor hall Saturday, December 30, 1911, at 8 p. m. Everyone cordially invited to attend.

Kills the Dandruff Germ

Stops Falling Hair—Others Imitate and Make Similar Claims, but the Genuine and Original Dandruff Germ Destroyer is Newbro's Herpicide.

The discovery of the dandruff germ as the cause of all hair troubles is not a recent event. Prof. Cuvier gave the germ theory to the world in 1847 and two years later Sabouraud by his experiments with a rabbit proved beyond a doubt the actual existence of this germ.

On the heels of this establishment of the germ theory came the discovery of Newbro's Herpicide. This was the first and only remedy for the destruction of the dandruff germ.

There have been other preparations alleged to kill this germ, stop falling hair and itching of the scalp, but Newbro's Herpicide really does these things. For this reason it has long been known as the original remedy and the only one that is genuine.

Men fooled by pretensions which are trading upon the marvelous success of Herpicide. Remember you take no chances with Newbro's Herpicide. It is absolutely guaranteed.

For sale by all druggists. Applications at good barber shops. The Herpicide Company, of Detroit, Mich., will send a sample bottle and booklet upon receipt of 10c in postage. Kelly & Pollard, special agents.

ITCH

"Hunt's Cure" is absolutely guaranteed to cure Itch, Eczema, Ringworm, Tetter, or any Skin Disease, or purchase price, cheerfully refunded. Sold everywhere for 50c a box, or write, A. B. Richards Medicine Co., Sherman, Texas.

Not Sisters

Now and again you see two women passing down the street who look like sisters. You are astonished to learn that they are mother and daughter, and you realize that a woman at forty or forty-five ought to be at her finest and fairest. Why isn't it so?

The general health of woman is so intimately associated with the local health of the essentially feminine organs that there can be no red cheeks and round form where there is female weakness.

Women who have suffered from this trouble have found prompt relief and cure in the use of Dr. Pierce's Favorite Prescription. It gives vigor and vitality to the organs of womanhood. It clears the complexion, brightens the eyes and reddens the cheeks.

No alcohol, or habit-forming drugs is contained in "Favorite Prescription." Any sick woman may consult Dr. Pierce by letter, free. Every letter is held as sacredly confidential, and answered in a plain envelope. Address: World's Dispensary Medical Association, Dr. R. V. Pierce, Pres., Buffalo, N. Y.

MINING NEWS

YEAR 1911 GOOD ONE FOR STATE OF CHIHUAHUA DESPITE REVOLUTION

Present Activity Greatest in History of State; Cusihuiriachic District Leads.

(By Phil McLaughlin.)

Chihuahua, Mex., Dec. 30.—Statistics of mining in northern Mexico for the year 1911 disclose a larger increase in the total volume than for the previous year, especially in the state of Chihuahua, and this in spite of the fact that for the first five months in the year a revolution was in progress which tied up completely in several instances the railroads on which many properties depended for escape to the smelters. At the same time many properties closed down entirely, some of them for two or three months. The revolution being indirectly the cause.

The present activity was never greater in the history of the state; improvement is shown in every district. The outlook for further political troubles in this state is remote; the people are poor in pocket as a result of the late crop, but crop are coming in time and as a consequence they must buy with what little ready money they have or else be credited with their share until the crops come in again. Another revolution in this northern section would mean starvation in a very short time, and the people are engaged, as it would cause the closing down of mines and factories.

Cusihuiriachic Makes Gains.
The Cusihuiriachic district has shown by far the greatest gain of any district in the state, principally because of the railroad extension from San Antonio, Mexico, to the heart of the mining section of the town. Many properties which had been dormant for years have been revived, and the district has life with the advent of the railroad and low grade ore which could not be shipped at a profit overland are now being loaded in the Green mine.

Thousands of tons of ore that have been lying on the dumps of these former inactive districts are now being shipped to the smelters daily, thus bringing to the Cusihuiriachic district a new lease of life. The population of the camp was twice greater than it is now.

Santa Eulalia District.
The Santa Eulalia district came to the front rapidly during the year and seems to be making giant strides toward the goal of the leading camp of the whole state. High values in silver and gold are being produced, and the district has a chance to be high in the proved mineral zone, but also in the sections where there are no working mines.

The successes made by the Chihuahua and Potosi, and the Santa Eulalia have shed a new light on the district. It is estimated, based on the number of operating properties there, that the Santa Eulalia is the richest mining district in the whole of Mexico, if not in the world.

Mines Near City Active.
The mines close to the city have been making encouraging returns. New and the volume for the past three months has been greater than for any period in the past several years. The properties are being opened every week and it is safe to say that the Chihuahua district will show far greater returns in 1912 than for the preceding year.

Parral Comes to Front.
Another district in the state that has come to the front in the past three months is Parral, in the southern end. Judging from the reports coming from there each week for the past month, that camp bids fair to make some fine successes of seven and 10 years back, when the Pinalis mine opened the eyes of the world to the wonderful mineral possibilities of the district. The big factor on which Parral bases its ultimate success is cheap power, which will be obtained from the Conchos river dam now building. With the successful operating of this gigantic proposition the future of that district is assured.

During the past two months the mines in the Parral district have changed hands in the Parral district, and it is fair to assume that at least half of that number will be operated either on large or small scales.

Other districts in the state which have shown remarkable gains during the year have been Santa Barbara, San Francisco del Oro, Guaymas, Batopilas, Las Plomosas, Santo Domingo, Terrenas, Guaymas and Almoloya and Nalca.

As reflected in these statements, mining for the year now drawing to a close has been most satisfactory and the increase and activity away beyond the average.

French Bankers Interested.
For the past 10 days a number of French bankers, in company with a well known mining engineer, have been making an examination of the Ajacinto property, in the Santa Eulalia district, with a view to purchasing it. The examinations have been completed and they left for home well pleased with the progress and present condition of the property. The chances are said to be fine for a deal being consummated in the very near future.

The price asked by the owners is over \$1,000,000. S. G. Burn is in charge of the property.

Improvements at Rio Tinto.
In line with other improvements being made at Rio Tinto, in the Terezas district, a well is being drilled near the engine house door to save pumping water a distance of one kilometer to the mill. Hend and Wilson are the well contractors.

Completes Estrella Contract.
S. G. Burn has finished his first contract on the Estrella property in the Santa Eulalia district, having sunk the shaft the required distance of 300 feet in a little over three months. In a few
